

CeraLashLift System

PATCH TESTING

AFTERCARE

ALL CLIENTS SHOULD BE PATCH TESTED AS THIS IS A NEW FORMULATION.

Like our current LVL Lash Lifting System, there is a specific patch test pack you can purchase, so you don't need to use your treatment products. Each pack includes enough patch tests for 6 clients.

However, the new formulation only requires three products to be patch tested, following the usual application process and allowing a minimum of 48 hours before the treatment:

Step 2: LVL CeraLashLift Lifting Balm

Step 3: LVL CeraLashFix 2-in-1 Volumising Fix CeraLashTint (this does not need to be mixed with Step 3)

There is no need to patch test Steps 1, 4 or 5, as these are classed as unreactive cosmetic products.

Once successfully patch tested for the LVL CeraLashLift System, your clients will only need to be re-tested if returning for a treatment after 6 months has lapsed or if any changes to their medical history.

NEW

LVL CeraLashLift System

®

Get ready for the next generation of lashes with the new LVL CeraLashLift System, exclusively for LVL artists. It's everything you know and love about our signature lash lift, but even better.

A BREAKTHROUGH IN FASTER TREATMENT TIMES

We've combined the fix and tint steps for 33% faster processing times

A BREAKTHROUGH IN LASH HEALTH

Keep your clients' natural lashes even healthier with conditioning ceramides, strengthening keratin and innovative pH rebalancing

A BREAKTHROUGH IN SUSTAINABILITY

New 100% vegan formula in more sustainable packaging

CeraLashLift System

THE TREATMENT

To help you get the best out of our latest breakthrough, here's a handy quick start guide. Make sure you familiarise yourself with the key changes before performing your first treatment.

STEP ONE

LVL CeraLashBond BONDING GEL

Use to adhere Shield to eyelid (may not be required when using LVL Smart Shields).

Use to adhere lashes to Shield.

Scan me for step by step demo

STEP TWO

LVL CeraLashLift LIFTING BALM

Use to break bonds in lash hair.

Apply out to in, working from root upwards to only halfway up natural lash.

Timings:

8 minutes – fine / dry / sparse lashes
10 minutes – average / healthy lashes
12 minutes – thick / coarse / dense lashes

Dry removal.

STEP THREE

LVL CeraLashFix 2-IN-1 VOLUMISING FIX + CeraLashTint (VARIOUS COLOURS)

Use to reset bonds in lash hair and add depth and colour with tint.

Mix CeraLashTint 1:2 ratio with LVL CeraLashFix, (no need for Tint Developer). Apply out to in, working from root to tip, covering all of the natural lash hair.

Timings:
8 minutes

Dry removal.

STEP FOUR

LVL CeraLashBalance pH RECONSTRUCTOR

Use to nourish and reset natural pH of lashes, helping prevent over-processing. Also removes the lashes from the shield and the shield from the eye lids.

Dispense 1 drop per eye, coat lashes and sweep under shield, using Micro Brush.

STEP FIVE

LVL CeraLashRestore MOISTURISING COMPLEX

Use to condition the lashes at the end of the treatment and help hold the final curl in place.

Apply using a Mini Mascara Wand.

WHAT IF MY CLIENT DOES NOT WANT A TINT OR IS CONTRAINDICATED TO TINT?

Please use our LVL CeraLashLift Volumising Fix 1.9% in place of the 2-in-1 Volumising Fix and leave on for 7 minutes. This is available separately on nouveaulashes.com.
